

Innovating a Better Way in Corn Oil Refinement

Cleaner Oil. Smarter Service. Premium Product.

Unlock Cleaner, More Profitable DCO Production

Trucent's Corn Oil Refinement Equipment is a Trucent technology module that significantly reduces impurities in Distillers Corn Oil (DCO), producing cleaner DCO, which can be sold to refineries producing renewable diesel and sustainable aviation fuel.

Trucent oil treatment advancement stems from years of vegetable oil processing experience combined with proprietary fluid separation techniques and solutions.

How the Trucent Corn Oil Refinement Equipment Works:

Trucent's Corn Oil Refinement Equipment is an operator-friendly, skid-mounted module with low operating costs and quick ROI.

It can be used in any DCO or crude renewable oil facility, enhancing revenue by upgrading crude distillers corn oil to a low-carbon-intensity feedstock for the renewable diesel and sustainable aviation fuel industries.

Distinctive Support

Trucent's Corn Oil Refinement Equipment includes a comprehensive Support Program with analytical, quality, technical, and operational support, plus a robust oil marketing program with tools for measuring TruDCO quality, training, service, parts, maintenance, and operational assistance.

Quit Ducking Around.
What you remove matters.
