

Innovating a Better Way in Corn Oil Separation

Better Yield. Cleaner Oil. Smarter Service.

Optimized DCO Separation:

- Easy installation with single point process, utility, and communication connections
- Proven components for maximum system uptime and reliability
- Compact, modular design to minimize floor space
- De-oiling system for thin stillage/syrup stream
- Seamless plant design integration
- Industry-leading uptime, production rates, and returns
- Highest oil quality

Trucent: The Industry-Leading Service Provider

- Advanced Analytical Support
- Process Analytics
- Product Distribution
- Preventative Maintenance
- Shutdown Support
- Full Inventory of spare parts
- Emergency call-out services

Corn Oil Separation System Optimized for DCO Extraction

- Advanced Process Controls
- Integrated Oil Clarification and Transfer Skid
- Syrup Conditioning System
Self-Cleaning Syrup Conditioner
- Syrup Feed and Return System
- Proprietary Disc Stack designed for optimal DCO extraction
- Efficient Counter-Current CIP resulting in more uptime, less operational costs, and more efficient and higher yields

Quit Ducking Around.
Cleaner oil. Maximum uptime.
