

Innovating a Better Way in Adaptive Dosing

Better Yield. Smarter Service. Optimal Results.

Design and Operating Features:

- System can be programmed to run with customer's flow meter. No need for plant personnel to change dosing rates when production flow rate changes.
- Set the PPM input and the Smart Dosing System will calculate dosing rate even when flow rate changes.
- Run in Manual mode or Auto mode. Auto mode will stop the dosing system if the oil recovering system enters into wash mode or stops.
- Includes trending screen to monitor flow rates and pump speed
- Coriolis flow meter for higher accuracy
- Draw-down tube for checking dosing flow
- Can add the Mother Tote with level sensor
- Reduces operator labor

How it Works:

- The Trucent Smart Dosing System delivers a consistent additive stream through a precision-engineered pump built into the skid. When integrated with the plant's flow meter, the Smart Dosing System automatically adjusts to maintain a steady dose rate, even as flow conditions change.
- The result: optimized performance and reduced additive costs.

Quit Ducking Around.
Get your dosing right.
